METHODOLOGIES USED IN COMPILING DATA

Annex 1 | Starting January 2001, the scope, research samples and aggregation weights used in establishing selected statistical indicators were updated. Monthly data are still provisional and will be updated on a yearly basis, namely economic indicators will be based on business surveys and social indicators on specific yearly surveys. In order to ensure indicator comparability, the data series will be updated after the recalculation of data published by the National Institute of Statistics.

Annex 2 | Starting January 1998, producer price index refers to industrial output delivered on the home market.

Annex 9 | **Interbank assets** cover refinancing credits to banking companies, State Treasury's investments with banks and forex deposits with banks. **Interbank liabilities** include commercial banks' lei and forex deposits with the central bank and the State Treasury accounts balance (receipts and payments accounts relative to state budget, local budgets, social security budget and extra-budgetary funds with commercial banks as operations performed through the General Account of Treasury). Starting December 1996, interbank liabilities include commercial banks' reserves only. **Other assets / liabilities** include items (accounts) relative to the central bank's own activity (assets – fixed assets, debtors, projected expenses, etc.; liabilities – settlements, creditors, etc.).

Annexes 9,11 | **General Account of State Treasury** includes receipts and payments accounts related to the state budget, local budgets, social security budget and extrabudgetary funds with commercial banks.

Annexes 9,11,14 | **Monetary gold** represents the central bank's gold holdings and it is part of foreign reserves. The National Bank of Romania's stock of monetary gold is valued in US dollars at the price on the London Bullion Market on the last day of the month. The stock of gold was valued in lei (local currency) at a sole domestic price; the current price was

applied when recording gold inflows and outflows. The stock of gold is revalued at the end of the year.

Annex 11 | **Net foreign assets** of banks are calculated by subtracting foreign liabilities in convertible currency from foreign assets in convertible currency (reserve assets plus equity interests in foreign banks).

Annex 13a | **Monthly volume of forex transactions** represents the sum of the highest daily levels of sales and purchases in the forex market. **Annual average volume of forex transactions** is calculated as an arithmetic mean of monthly forex transactions during the year.

Annex 14 | According to the international standard definition, Romania's international investment position includes the stock of foreign assets and liabilities at the end of the reported period. Differences between foreign assets and foreign liabilities at the beginning and end of period respectively, which do not result from foreign transactions but from changes in the exchange rate, world prices or other changes are recorded in the table on international investment position only. **Reserve foreign assets** include the following items: monetary gold; SDR holdings; convertible currencies, which cover the following elements: foreign currency and cheques, banks' deposits abroad, foreign securities, and others.

Annex 16a | **The BET (Bucharest Exchange Trading) index** is the BSE's first official index, reflecting the overall trend in prices of the 10 most liquid shares traded at the bourse. It is calculated as a weighted (capitalised) average of the securities that make up the index portfolio. Shares shall be listed on the BSE's first tier and shall have the largest market capitalisation (more than 60 percent of the total stock market shall be accounted for by shares in the BET basket).

The Composite Index of Bucharest Stock Exchange (BET-C) represents the movements of shares traded on

the Bucharest Stock Exchange. The principle of computation is the same with that of BET index. The index basket will be updated automatically by including the new companies, at the price set on the day next to being quoted. Furthermore, the BET-C reflects the changes to the registered capital of listed companies.

BET-FI Index was originally computed for the five Financial Investment Companies listed and is envisaged to include all investment funds to be listed subsequently. The index was launched on 1 November 2000; its reference value equalled 1,000 points as of 31 October 2000; the principle of computation is the same with that for BET-C Index, namely capitalisation weighted and updated consistent with capital increases and closing prices.

Annexes 17a,17b | **The credit risk information** encompasses identification data on a debtor – non-bank, legal or natural entity and the following lei and foreign-exchange-denominated operations whereby the banks face risk exposure to the respective

debtor: (a) loans and (b) commitments assumed by the bank on behalf of the debtor.

The risk information refers to the exposure of every bank in the Romanian banking system to a single debtor, which may be equal to or upwards of ROL 200 million. **The term of loan** is consistent with Law No. 58/1998 – The Banking Act; **Ownership of borrower** is consistent with Methodological Norms No. 370452/1992 (Ownership Nomenclature) issued by the Ministry of Finance; this classification meets the analysis requirements of the National Bank of Romania; **Loans granted to non-bank, legal or natural entities (by risk)** is consistent with the Chart of Accounts for Banks (1997); **Currency-denomination of loans** is consistent with applicable regulations worldwide; the classification meets the analysis requirements of the National Bank of Romania; **Business of borrower** is consistent with the Romanian Government's Decision No. 656/1997 (regarding Classification of Activities in the National Economy); the classification meets the analysis requirements of the National Bank of Romania.
