

Romania's Balance of Payments and International Investment Position Annual Report 2016 Romania's Balance of Payments and International Investment Position Annual Report 2016

#### NOTE

The drafting of Romania's Balance of Payments and International Investment Position – Annual Report 2016 was completed by the Statistics Department based on data available at end-November 2017.

Some of the statistical data are provisional and will be updated as appropriate in the subsequent publications of the National Bank of Romania. The source of data was indicated only when data were provided by other institutions.

Data series were compiled in compliance with the BPM6 methodology and are available on the National Bank of Romania's website at: http://www.bnr.ro/Baza-de-date-interactiva-1107.aspx.

The detailed methodology containing definitions, legislation and sources are available on the National Bank of Romania's website under Statistics, Data sets, Balance of Payments and International Investment Position - BPM6, Balance of payments, Methodology or via this link: http://www.bnr.ro/Balanta-de-plati-%e2%80%93-Precizari-metodologice-11756.aspx.

## • External environment<sup>1</sup>

World economy continued to expand in 2016, albeit at a slower rate than in the previous year (3.2 percent versus 3.4 percent in 2015), with the global environment being marked by uncertainty episodes, especially as regards the future of the UK as an EU Member State and the US presidential elections. Advanced economies further benefited from accommodative financing conditions and improving labour markets. Economic activity in emerging market economies was moderate, with the deceleration of the Chinese economy and the sluggish pace of recovery in commodity-exporting economies taking their toll. The slower rate of increase of global production brought about a loss of momentum in global trade in goods and services, up merely 1.7 percent, compared with 2.1 percent in 2015.

Overall, financial markets remained stable, despite the uncertainty triggered by the above-mentioned political events, benefiting from support from central banks in major advanced economies, which maintained an accommodative policy stance. Average annual inflation rate² rose from 0.6 percent in 2015 to 1.1 percent in 2016, amid narrowing output gaps in advanced economies, the slight decline in spare capacity in several emerging market economies and the hike in food prices. Average price of energy (crude oil, coal and natural gas)³ decreased by 16.6 percent in 2016, the major influence coming from crude oil, whose average spot price calculated as an average of UK Brent, Dubai and West Texas prices contracted by approximately 16 percent. Commodity prices⁴ posted a much slower fall in 2016 compared with that of a year earlier (-1.9 percent versus -17.4 percent), with the fall in prices of metals and agricultural raw materials being offset by the rise in food prices.

In the United States of America, the rate of increase of the gross domestic product slowed to 1.5 percent, from 2.9 percent in 2015, against the background of a decline in investment in the energy sector and lower inventories. Labour market conditions remained favourable, pushing unemployment rate down to 4.7 percent at the end of 2016, compared with 5.3 percent a year before. In 2016, average annual inflation rate stood at 1.3 percent versus 0.1 percent a year earlier. The federal budget deficit widened to 4.4 percent of GDP, compared with 3.5 percent in the prior year, while the federal debt increased to 107.1 percent of GDP, from 105.2 percent of GDP. The current account deficit<sup>5</sup> stayed flat at 2.4 percent of GDP.

Japan's economy grew by 1 percent, thus replicating the year-earlier performance, supported by accommodative monetary and fiscal policies and labour market consolidation. Unemployment rate went down to 3.1 percent, from 3.4 percent in the previous year. Average annual inflation rate turned slightly negative in 2016, coming in at -0.1 percent versus 0.8 percent in 2015, as a result of declining global commodity prices and the stronger yen.

<sup>&</sup>lt;sup>5</sup> BPM6 methodology.

Euro area economy<sup>6</sup> expanded by 1.8 percent in 2016, compared with 2.1 percent in 2015, reflecting the positive and rising contribution of domestic demand (2.2 percentage points to GDP dynamics, a record high from 2007 onwards), fostered in particular by private consumption and investment. The major determinants driving private consumption higher were improvements in labour market conditions, which had a positive impact on the increase in income, and low interest rates. The accommodative monetary policy, which translated into favourable financing conditions, for small- and medium-sized enterprises as well, and increases in corporate profitability and production capacity utilisation fostered investment that made a positive contribution to GDP growth (0.9 percentage points, compared with 0.6 percentage points a year earlier) for the third year in a row. Euro area government consumption contributed positively to economic growth (0.4 percent in 2016, against 0.3 percent in 2015).

Net exports of goods and services had a negative contribution to GDP growth (-0.4 percentage points), following an almost neutral effect in 2015 (0.1 percentage points), amid the reduction in import demand from the major trade partners of the euro area (USA; Asia, China excluded; and a number of emerging market economies). As a result, exports of goods and services advanced at a slower pace than in 2015 (3.3 percent versus 6.4 percent) and imports of goods and services stood 4.7 percent higher in 2016, after having risen by 6.7 percent in the preceding year.

The breakdown by sector shows that euro area's economic recovery was broad-based in 2016. Gross value added ticked up 1.7 percent, compared with a rise of 1.9 percent a year earlier. The largest positive contributions to GDP growth came, similarly to 2015, from manufacturing, trade, transport, and communications, computer and information services.

Average annual inflation rate, as measured by the Harmonised Index of Consumer Prices (HICP), inched up to 0.2 percent, from 0 percent in 2015, with the fluctuations seen in the course of the year reflecting those of energy prices.

The labour market in the euro area continued to recover in 2016, with the number of employed persons climbing 1.3 percent and the unemployment rate<sup>7</sup> slipping to 10 percent, from 10.9 percent in 2015.

In 2016, the general government deficit for the euro area narrowed to 1.5 percent of GDP<sup>8</sup>, from 2.1 percent of GDP in 2015, amid favourable developments in the business cycle and lower interest costs. The general government deficit narrowed or stayed virtually flat from 2015 in ten out of the 19 euro area members, with two countries exceeding the 3 percent-of-GDP reference value, namely Spain and France. The lowest deficit-to-GDP ratio was recorded by Estonia (0.3 percent), whereas Luxembourg,

The countries referred to herein are the 19 EU Member States making up the monetary union at end-2016: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Spain, Slovakia and Slovenia.

According to ILO (International Labour Office) methodology.

<sup>8</sup> Newsrelease Euroindicators 160/2017: Provision of Deficit and Debt Data for 2016 – Second Notification, 23 October 2017, Eurostat.

Germany, the Netherlands, Greece, Cyprus, Latvia, Lithuania and Malta experienced budget surpluses. The euro area public debt ratio shed one percentage point versus the previous year to 88.9 percent of GDP. The debt-to-GDP ratio overstepped the 60 percent reference value in 14 countries and remained above 100 percent in Greece, Italy, Belgium, Cyprus and Portugal.

The aggregate current account of the euro area ended 2016 on a surplus of EUR 360 billion, or 3.3 percent of GDP, up 7.5 percent from a year earlier, on the back of the surplus on trade in goods driven by the downturn in imports.

Non-euro area EU Member States<sup>9</sup> reported economic growth of 2.3 percent in 2016, down from 3.0 percent in 2015, spurred by domestic demand, especially general government and household consumption. All the nine EU Member States under review posted economic growth, with the best performers being Croatia, Sweden and Romania, with rates of increase ranging from 3 percent to 4.8 percent.

Average annual inflation rate went up in the region overall to 0.3 percent in 2016, compared with -0.1 percent in 2015, reflecting largely the hike in energy prices. Sweden experienced the highest average inflation rate, at 1.1 percent, while four out of the nine countries registered deflation.

The fiscal situation improved in eight of the nine non-euro area EU Member States, generally on account of income consolidation. On the whole, the deficit-to-GDP ratio narrowed to 2.0 percent in 2016, from 3.1 percent a year earlier, all countries complying with the 3 percent reference value. Government debt accounted for 68.4 percent of GDP in 2015, down from 71.3 percent of GDP in 2015. It surpassed the 60 percent-of-GDP reference value in the United Kingdom, Croatia and Hungary, while being on the wane in the first two countries and on the rise in the last.

The current account deficit widened in the non-euro area EU Member States on the whole, reaching 2.3 percent of GDP in 2016, against 2.1 percent of GDP a year before. Behind this stood a larger shortfall on primary income, chiefly in the United Kingdom, but also in Poland, Denmark and Croatia. Direct investment displayed net inflows tantamount to around EUR 230 billion, or 5.6 percent of GDP in the nine countries overall (versus 2.3 percent of GDP in 2015), as a result of increases mainly in the United Kingdom, the Czech Republic and Croatia. Portfolio investment posted a net inflow worth approximately EUR 183 billion (4.5 percent of GDP, compared with 5.1 percent of GDP in 2015), with the United Kingdom being accountable for nearly 95 percent. Other investment (largely loans and deposits) reported a net outflow of more than EUR 210 billion, or 5.1 percent of GDP (against 7.4 percent of GDP in 2015).

The countries referred to herein are the nine non-euro area EU Member States at end-2016: Bulgaria, Croatia, the Czech Republic, Denmark, Hungary, Poland, Romania, Sweden and the United Kingdom.

# II. Romania's balance of payments and international investment position in 2016

## A. Balance of payments

2016 saw an ongoing widening of the current account deficit, a trend that had started in 2014, on the backdrop of a worsening of the balance on goods and that on primary income. The capital account surplus strengthened and thus the combined current and capital account balance remained in positive territory (Chart 1).

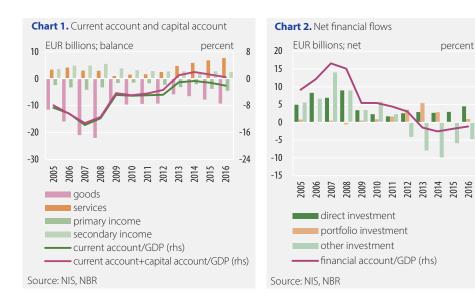

16

12

-4

-8

-12

At the same time, net financial outflows have been contracting since 2014, due to the finalisation of repayments on the IMF's 2009 Stand-by Arrangement and the consolidation of direct investment (Chart 2).

In 2016, the current account ran a deficit of EUR 3.5 billion, i.e. more than three fourths higher than the year-earlier reading, while the capital account surplus widened by approximately 10 percent. The combined current and capital account posted a surplus of EUR 0.8 billion. The current account deficit from intra-EU trade, worth EUR 4.5 billion, was partly offset by the extra-EU trade surplus of EUR 1 billion. Looking at the relation with the EU, Romania's current account deficit was more than 90 percent offset by the capital account surplus. Out of the current account deficit with EU countries, the EUR 3.2 billion deficit with the euro area (EA¹0) accounted for approximately 70 percent (Table 1).

<sup>&</sup>lt;sup>10</sup> European institutions not included.

Liabilities	-3,489	-2,635	-854	-2,287	-1,202			
Note: Extra-EU – countries outside the EU; Extra-EA – EU countries outside the euro area.								

In the course of 2016, the financial account displayed EUR 1.5 billion in net outflows following the higher net increase in liabilities in the form of direct investment and portfolio investment and the slower net decrease in "other investment" liabilities, mirroring basically the developments in foreign borrowings. As for the geographical breakdown, the transactions with the EU impacted the financial account, the same as the current account and the capital account.

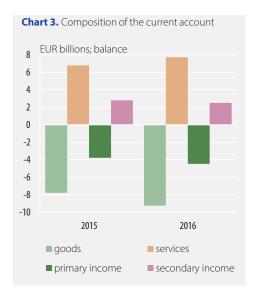

#### 1. CURRENT ACCOUNT

Table 2. Components' contributions to developments in the current account deficit							
					percent of GDP		
	Current account	Goods	Services	Primary income	Secondary income		
2016	-2.1	-5.5	4.5	-2.6	1.5		
2015	-1.2	-4.9	4.3	-2.4	1.8		
Difference (pp)	-0.9	-0.6	0.2	-0.2	-0.3		

In 2016, Romania's balance-of-payments recorded a current account deficit of EUR 3,498 million, compared with EUR 1,972 million in 2015. The current account deficit as a share of GDP<sup>11</sup> equalled 2.1 percent, compared with 1.2 percent in the previous year (Table 2). The 0.9 percentage point increase was ascribed to larger

 $<sup>^{11}\,</sup>$  GDP: NIS (final data for 2015 and provisional data for 2016).

shortfalls on trade in goods (up 0.6 percentage points of GDP) and primary income (up 0.2 percentage points of GDP), as well as the narrowing of the surplus on secondary income (down 0.3 percentage points of GDP).

The developments in the current account and its components (Chart 3) show a wider deficit on trade in goods (up 18.8 percent; Table 3) in 2016 versus the previous year, as imports augmented at a swifter pace than exports. The deficit on primary income saw an increase, which was largely the result of profits made by direct investment enterprises, while the surplus on secondary income exhibited a slight decline. In 2016, the surplus on trade in services moved ahead 13.7 percent year on year, spurred by the advance in processing of goods, road freight transport services,

and communications, computer and information services.

#### 1.1. Balance on goods and services

In 2016, the balance on goods and services showed a deficit of EUR 1.5 billion, i.e. 54 percent higher than the year-earlier reading, owing to the roughly one fifth increase in the deficit on trade in goods.

#### 1.1.1. Balance on trade in goods<sup>12</sup>

The deficit on trade in goods came in at EUR 9,254 million in 2016, up 18.8 percent year on year, as exports and imports increased by 6.2 percent and 7.9 percent respectively. The trade deficit-to-GDP ratio added 0.6 percentage points to 5.5 percent (Table 4).

<b>Table 4.</b> Balance on trade in goods

Source: NIS, NBR calculations						

Over the reviewed period, the highest monthly trade deficit stood at EUR 1,115 million in December and the lowest was of EUR 372 million in January.

The breakdown of trade balance by the eight groups of goods in the Combined Nomenclature shows deficits for chemical and plastic products (EUR 5,950 million), base metals (EUR 1,908 million), mineral products (EUR 1,742 million), textiles, wearing apparel and footwear (EUR 1,053 million), agrifoodstuffs (EUR 710 million) and surpluses for machinery, apparatus, equipment and transport means (EUR 1,563 million), wood and paper products (EUR 383 million), and other goods (EUR 185 million)<sup>13</sup>.

By geographical breakdown, intra-EU trade was almost the only source of the deficit on trade in goods (97.6 percent), with extra-EU trade accounting for a meagre 2.4 percent.

The coverage of imports by exports moved down 1.4 percentage points to 84.9 percent, while the openness of the Romanian economy added 0.9 percentage points to 67 percent.

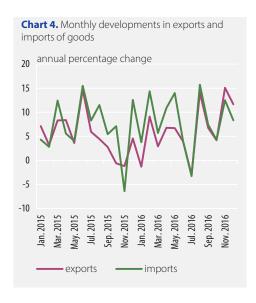

NATIONAL BANK OF ROMANIA

1

According to the BPM6 methodology, the balance on trade in goods does not include goods for processing for which there is no change in ownership and thereby differs from the international trade in goods compiled and published by the National Institute of Statistics in line with the specific methodology prepared by Eurostat.

<sup>13</sup> The difference between the sum of components (EUR 9,232 million) and the balance on trade in goods in Table 4 (EUR 9,254 million) is reflected by the deficit on "merchanting" (EUR 22 million).

Exports of goods amounted to EUR 52,170 million, up 6.2 percent against a year earlier, given the stronger external demand, particularly from the European Union, from both euro area and non-euro area countries. In terms of value, exports stood EUR 3,057 million higher than in 2015 and their share in GDP edged up 0.2 percentage points to 30.8 percent in 2016.

January witnessed the lowest monthly exports in 2016, i.e. EUR 3,712 million, while the highest came in at EUR 4,856 million in November (Chart 4). The monthly average of exports equalled EUR 4,348 million, up EUR 255 million against the prior year.

Imports of goods (FOB) were valued at EUR 61,424 million, up 7.9 percent, or EUR 4,523 million, compared with 2015. The share of imports of goods in GDP picked up 0.7 percentage points to 36.2 percent. The lowest monthly import level of 2016 equalled EUR 4,084 million in January and

the highest was of EUR 5,636 million in November. The monthly average of imports amounted to EUR 5,119 million, up EUR 377 million from the previous year.

#### Structure and geographical breakdown of exports of goods

#### a) Structure of exports of goods

In 2016, two groups of goods reported larger contributions to Romania's exports than in 2015 (Table 5): machinery, apparatus, equipment and transport means (by 2.8 percentage points) and other goods (by 0.6 percentage points) and five groups saw smaller shares in total exports, as follows: mineral products (by 1 percentage point), base metals (by 0.9 percentage points), chemical and plastic products (by 0.7 percentage points), and wood and paper products (by 0.5 percentage points).

#### b) Geographical breakdown of exports of goods

In 2016, intra-EU exports amounted to EUR 38,425 million, up 8.2 percent over the year before (Table 6). The share of intra-EU exports in total exports stood at 73.7 percent, up 1.4 percentage points versus 2015, due to larger foreign sales to Germany, Italy, France, Poland and the United Kingdom.

Exports to the European Union increased for four groups of goods: machinery, apparatus, equipment and transport means; textiles, wearing apparel and footwear; wood and paper products; and other goods (Table 7).

The following groups of goods posted larger contributions to intra-EU exports in 2016: machinery, apparatus, equipment and transport means (by 2.7 percentage points) and other goods (by 0.5 percentage points).

Extra-EU exports amounted to EUR 13,745 million, a reading comparable to that posted in 2015, holding 26.3 percent of total exports of goods, 1.4 percentage points lower than in the previous year.

In 2016, the top ten export destinations, making up 63.1 percent of the total figure were as follows: Germany (21.2 percent of total exports), Italy (9.2 percent), France (7.3 percent), Hungary (5.4 percent), the United Kingdom (4.1 percent), Turkey (3.5 percent), Bulgaria (3.5 percent), Spain (3.2 percent), Poland (3.2 percent), and the Czech Republic (2.5 percent).

#### Structure and geographical breakdown of imports (FOB)

#### a) Structure of imports of goods

Imports of goods were accounted for in a proportion of more than 77 percent by four groups of goods: machinery, apparatus, equipment and transport means; chemical and plastic products; agrifoodstuffs; base metals (Table 8).

Five groups of goods posted larger shares in total imports than in 2015, with increases ranging between 0.1 percentage points and 0.5 percentage points: textiles, wearing apparel and footwear; agrifoodstuffs; machinery, apparatus, equipment and transport means; other goods; and wood and paper products.

#### b) Geographical breakdown of imports of goods

Intra-EU imports amounted to EUR 47,459 million in 2016, up 8.2 percent year on year (Table 9). The share of intra-EU imports in total imports of goods rose by 0.2 percentage points versus 2015 to stand at 77.3 percent, with Germany and France accounting particularly for this pick-up.

Extra-EU imports amounted to EUR 13,965 million, up by 7.2 percent from 2015, accounting for 22.7 percent of total imports of goods, i.e. 0.2 percentage points lower than in 2015.

In 2016, Romania's imports came mainly from the following ten countries, carrying 68.4 percent of total imports: Germany (20.3 percent), Italy (8.8 percent), Hungary (8.0 percent), France (5.5 percent), Poland (5.4 percent), China (5.3 percent), the Netherlands (4.3 percent), Turkey (3.9 percent), Austria (3.6 percent) and Bulgaria (3.3 percent).

#### **Energy trade balance**

In 2016, the energy trade balance ended on a deficit of EUR 1,511 million, up 10.1 percent from the previous year (Table 11). As a share of the deficit on trade in goods, net energy imports diminished from 17.6 percent in 2015 to 16.3 percent in 2016. Crude oil, reporting net imports worth EUR 1,946 million, made further the largest contribution to the energy trade deficit.

Energy exports totalled EUR 2,092 million, down 14.5 percent (EUR 356 million) from 2015, accounting for 4 percent of total exports of goods, compared to 5 percent in 2015. Energy imports came in at EUR 3,603 million, standing 5.7 percent lower than in 2015 (EUR 3,820 million), with a EUR 217 million drop in terms of value. As a share in total imports of goods, energy imports declined from 6.7 percent in 2015 to 5.9 percent in 2016.

The coverage of imports of energy resources by exports thereof declined by 6 percentage points to 58.1 percent.

#### 1.1.2. Balance on trade in services

In 2016, the balance on trade in services posted a EUR 7,723 million surplus (4.5 percent of GDP) compared to EUR 6,794 million (4.3 percent of GDP) in 2015, on account of the increase in receipts from road freight transport; communications, computer, and information services; professional and management consulting services (Table 12). The main components of the balance on trade in services reporting a favourable evolution compared to 2015, i.e. higher surpluses, were: communications, computer, and information services; transport; and processing of goods.

Receipts from services totalled EUR 18,007 million (up 8.2 percent from 2015), with more than 30 percent coming from transport (especially from road freight). The composition of receipts is relatively stable, with a more noticeable change versus 2015 consisting in the pick-up in the share of receipts from communications, computer, and information services (from 16.2 percent to 18.2 percent) and from professional consulting (from 9.4 percent to 9.8 percent) to the detriment of receipts from transport (whose share went down from 31.3 percent to 30.7 percent), the processing of goods (down from 15.4 percent to 14.6 percent) and travel (down from 9.3 percent to 8.7 percent).

Services-related payments stood at EUR 10,284 million (up 4.4 percent from the previous year), with miscellaneous services (maintenance and repair, construction, financial and insurance services, charges for the use of intellectual property, research and development, technical and trade-related services) holding roughly 35 percent. The breakdown shows larger shares of payments for transport (up 0.4 percentage points to 18.6 percent) and communications, computer, and information services (by 1.1 percentage points to 13.2 percent).

Trade in services is mainly carried out with 11 countries, with roughly 80 percent of receipts coming from and over 70 percent of payments being made to: Germany, Italy, France, the United Kingdom, the United States of America, Austria, the Netherlands, Spain, Belgium, Hungary and Switzerland.

#### 1.2. Balance on primary income

The balance on primary income ended the year 2016 on a EUR 4,467 million deficit, with the 18.4 percent rise versus the previous year being ascribable to investment income, which reported a 13.9 percent wider deficit (to EUR 6,405 million; Table 13). The share of the income deficit in GDP rose by 0.2 percentage points from 2015 to 2.6 percent. The compensation of employees, representing income from activities performed based on a work contract for less than one year, posted a 13.4 percent larger surplus to EUR 636 million. The surplus on other primary income also stood slightly higher, i.e. by 0.9 percent, to EUR 1,302 million, following the trend in the subsidies from the European Agricultural Guarantee Fund – EAGF (up by about EUR 90 million than in 2015).

In 2016, investment income continued to post an unfavourable evolution, especially in the context of a larger deficit on direct investment income. The direct investment income deficit rose by more than 30 percent to EUR 5,041 million amid the pick-up in reinvested earnings and dividends. Portfolio investment income recorded a EUR 962 million deficit, a level comparable to that seen in 2015 (EUR 910 million), owing primarily to interest payments on the bonds issued by the general government, the same as in the previous year. The deficit reported by other investment income shrank by about 35 percent to EUR 685 million, on account of lower interest payments on foreign loans.

#### 1.3. Balance on secondary income

The balance on secondary income ended the year 2016 on a EUR 2,500 million surplus, 10.6 percent below the previous year's level, mainly reflecting the fall in the volume of miscellaneous current transfers (Table 14). The balance on secondary income of the general government ended the year on a surplus of EUR 146 million, close to the one of EUR 149 million in 2015, given comparable EU fund inflows under current transfers<sup>14</sup>. The balance of private secondary income posted a EUR 2,354 million surplus, down by 11 percent from 2015. Workers' remittances from abroad stood 12.6 percent above the 2015 level against the background of the economic recovery in the main destination countries for Romanian workers (Italy, Spain, France, Germany).

Payments from the EU budget to Romania in 2016, recorded as current transfers received by the general government, totalled EUR 1,626 million<sup>15</sup>, with approximately 43 percent of this amount coming from the European Social Fund (ESF) and

<sup>14</sup> Current transfers include European funds other than subsidies (included under primary income) or than those for gross fixed capital formation (included under capital transfers).

<sup>&</sup>lt;sup>15</sup> Source: Ministry of Public Finance.

33 percent from the European Agricultural Fund for Rural Development (EAFRD), while the remainder was miscellaneous secondary income. Payments to the European Union amounted to EUR 1,505 million, representing almost entirely Romania's contribution to the EU budget.

#### 2. CAPITAL ACCOUNT

The capital account saw net inflows of EUR 4,260 million, up by 9.2 percent from 2015 (Table 15), on account of the advance in the capital transfer surplus<sup>16</sup> from EU funds in the form of capital transfers, mainly from the European Regional Development Fund and the Cohesion Fund.

Table 15. Capital account

 $<sup>^{\</sup>rm 16}$  Capital transfers include European funds which contribute to gross fixed capital formation.

#### 3. FINANCIAL ACCOUNT<sup>17</sup>

In 2016, the financial account witnessed net outflows worth EUR 1,550 million, compared with EUR 2,280 million in the previous year (Table 16), with the downward trend being driven, on the one hand, by the rise in direct investment net inflows and, on the other hand, by the drop in net outflows in the form of other investment (mainly loans).

Table 16. Financial account		
		EUR millions
	2015	2016

Net acquisition of assets	-600	2,258
Note: "+" increase, "-" decrease for both net acquisition of asse	ts and net incurrence of	liabilities.

Direct investment saw larger net inflows in the form of reinvestment of earnings by non-residents in direct investment enterprises in Romania and intercompany loans taken by non-financial corporations.

The slowdown in the net outflows under other investment/loans was mainly the result of the drop in repayments by the general government and the central bank on foreign loans.

#### 3.1. Direct investment

In 2016, direct investment recorded net inflows in amount of EUR 4,513 million, up by more than 50 percent than in 2015, i.e. EUR 2,955 million (Table 17), amid both the reinvestment of earnings by foreign-owned companies in Romania, including equally monetary financial institutions and enterprises in the non-bank sector, and the intercompany lending.

<sup>17</sup> The financial account covers foreign transactions in financial assets and liabilities, shown under the net acquisition of assets and the net incurrence of liabilities respectively. The difference between the net acquisition of assets and the net incurrence of liabilities (net) points to a net inflow in case of (-) and to a net outflow in case of (+).

Table 17. Direct invest	ment

Investment by non-residents in Romania<sup>18</sup> totalled EUR 4,517 million (Table 18), of which equity (consolidated with the net reinvestment of earnings) amounted to EUR 4,341 million and the net value of intercompany lending stood at EUR 176 million.

Investment by residents abroad reported an insubstantial net value (EUR 4 million), with equity being virtually offset by profit withdrawal and some repayments of loans granted by residents.

#### 3.2. Portfolio investment

In 2016, portfolio investment posted net inflows worth EUR 975 million, compared to EUR 5 million in 2015 (Table 19), amid the pick-up in government bond issues (two reopenings in February in amount of EUR 1.25 billion, a new issue worth EUR 1 billion in May and its reopening in October equal to EUR 1 billion).

#### 3.3. Other investment

In 2016, other investment recorded net outflows worth EUR 4,742 million, down 19.1 percent from the the previous year (Table 20), which reflected EUR 1,253 million in net acquisition of assets and EUR -3,489 million in net incurrence of liabilities.

Table 20. Other investment

The net acquisition of assets rose versus the previous year to EUR 1,253 million, from EUR 934 million in 2015, mainly reflecting the advance in the volume of short-term trade credit granted by resident non-financial corporations (Table 21).

Table 21. Other investment – net acquisition of assets

The negative net incurrence of liabilities diminished from 2015 (to EUR 3,489 million, from EUR 4,930 million), owing to a lower volume of repayments by the central bank under the 2009 Stand-by Agreement (EUR 123 million compared to EUR 1,376 million) and by the general government (Table 22).

To sum up, in 2016, the balance of payments posted a net volume of transactions in real assets in amount of EUR 762 million (shown under the combined current and capital account surplus), having as counterpart net outflows in the form of financial transactions worth EUR 1,550 million (net of financial account), with the difference being accounted for by errors and omissions. Net outflows in the form of financial transactions had a favourable impact on the international investment position, contributing to the decline in its debit balance.

### B. Romania's international investment position

#### 1. OVERVIEW

The international investment position saw its debit balance decrease by 2.6 percent from 2015 to EUR 83.8 billion at end-2016 (Chart 5).

Foreign funding featured the same breakdown by financial instrument as in the previous year, coming in the form of direct investment (equity, loans from direct investors), followed by other investment (loans and deposits) and portfolio investment (long-term debt securities; Table 23). Direct and portfolio investment reported larger shares unlike other investment, whose contribution to foreign funding posted further a downward trend.

The contribution to funding of financial loans and deposits from non-residents continued to decline, with the roll-over rate of deposit-taking corporations except the central bank decreasing to only 26 percent for long-term instruments while standing at 84 percent for short-term instruments.

In 2016, the currency composition of foreign assets revealed the prevalence of the euro and the US dollar, whose shares, albeit on a decline, totalled 77.8 percent. The foreign liabilities of the investment position were mainly

denominated in euro and lei, which jointly accounted for 91 percent, taking roughly similar shares (46.7 percent and 44.3 percent respectively). Foreign liabilities expressed in US dollars, special drawing rights and Swiss francs accounted for 8.5 percent of total, 0.6 percentage points lower than in 2015 (Table 24).

Other currencies	1,077	1.8	227	0.2			

At end-2016, foreign liabilities in the form of external debt instruments stood at EUR 92.9 billion (versus EUR 92.1 billion at end-2015), up 0.9 percent. Intercompany loans went up to EUR 26.1 billion (from EUR 22.1 billion in 2015), prevalently driven by short-term instruments (EUR 11.6 billion compared to EUR 8.5 billion at end-2015). Equity rose by EUR 3.9 billion (to EUR 49 billion at end-2016), which shows that non-resident partners continued to make long-term investment in shares and fund units issued by Romanian companies.

The NBR's net position went up to EUR 36.7 billion at end-2016 amid the climb in the central bank's foreign assets from EUR 35.5 billion to EUR 37.9 billion (Table 25). At end-2016, Romania's international reserves covered 6.3 months of the imports of goods and services. The breakdown shows net capital inflows (EUR 2.3 billion) and amounts arising from revaluations due to changes in the prices of gold and securities (EUR 0.1 billion).

Table 25. Foreign reserve assets		
		EUR millions
	31 December 2015	31 December 2016
Romania's international reserves	35,485	37,905
Gold	3,247	3,664

Credit institutions	3,512	4,240
Foreign currency	3,512	4,240
Foreign reserve assets, of which:	38,997	42,145
Foreign currency	35,750	38,481

The breakdown of the international investment position by institutional sector in 2016 (Table 26) shows that the sector of deposit-taking corporations except the central bank continued to see a decreasing net debit balance, from EUR 17.2 billion to EUR 13.6 billion, as a joint result of the increase in assets and the decline in foreign liabilities in the form of deposits. The foreign assets of credit institutions expanded by 20.7 percent versus 2015 to EUR 4,240 billion.

Table 26. International investment position					
	31 Decem	ber 2015	31 December 2016		
	EUR millions		EUR millions	%	
Total	-86,014	100.0	-83,753	100.0	
General government	-28,278	32.9	-29,177	34.8	
Central bank	33,963	-39.5	36,687	-43.8	
Deposit-taking corporations except the central bank	-17,189	20.0	-13,564	16.2	
Other sectors, of which:	-74,509	86.6	-77,699	92.8	
Non-financial corporations	-70,779	82.3	-73,949	88.3	

The net debtor position of the general government increased from EUR 28.3 billion to EUR 29.2 billion, up 3.2 percent versus 31 December 2015, amid the pick-up in this sector's external debt balance through a new government security issue and two reopenings of a 2015 issue.

Non-financial corporations recorded an increase in their net debtor position by 4.5 percent from 2015 to EUR 73.9 billion, given that equity in companies operating in Romania, intercompany lending and foreign loans continued to be the main means of financing.

#### 2. INTERNATIONAL INVESTMENT POSITION

#### 2.1. Foreign assets

At end-2016, foreign assets stood at EUR 61,163 million, up 12.3 percent year on year.

The composition of foreign assets by main component of the investment position remained similar to that seen in the previous year. Specifically, reserve assets further prevailed (Table 27), albeit with a slightly lower share of 62 percent, ahead of other investment (23.6 percent), direct investment (up 2.9 percentage points to 9.3 percent) and portfolio investment (5.2 percent).

At end-2016, foreign assets in the form of direct investment came in at EUR 5,673 million<sup>19</sup>, above the 2015 level, as a result of the increase in the volume of intercompany loans to non-resident enterprises.

Table 27. Foreign assets by instrument				
	31 December 2015		31 Decen	nber 2016
	EUR millions		EUR millions	%

Other accounts receivable	152	0.3	177	0.3
Reserve assets	35,485	65.2	37,905	62.0

According to the BPM6 methodological framework, in the standard presentation of the international investment position and of the gross/net external debt, the asset and liability principle has replaced the directional principle in the presentation of direct investment. The balance on direct investment abroad (directional principle) stood at EUR 728 million at end-2016.

The stock of portfolio investment of resident investors came in at EUR 3,163 million, adding 0.1 percentage points in terms of share. The breakdown of portfolio investment by instrument shows that resident investors further purchased in 2016 bonds and other long-term securities, as well as shares of foreign companies.

During the period under review, the stock of other investment went up 13.4 percent year on year, to stand at EUR 14.4 billion.

At end-2016, Romania's international reserves (foreign exchange plus gold) came in at EUR 37,905 million, up EUR 2,420 million from a year earlier, against the background of further principal repayments and interest payments in relation to external public debt falling due over the reported period and of a new issue of government securities.

Table 28. Foreign assets by institutional sector					
	31 Decen	nber 2015	31 December 2016		
	EUR millions		EUR millions		
Total	54,440	100.0	61,163	100.0	
General government	3,102	5.7	3,262	5.3	
Central bank	35,522	65.2	37,945	62.0	
Deposit-taking corporations except the central bank	4,371	8.0	5,265	8.6	
Other sectors, of which:	11,446	21.0	14,692	24.0	
Non-financial corporations	7,930	14.6	10,769	17.6	

The breakdown of foreign assets by institutional sector (Table 28) shows that, at 31 December 2016, the central bank continued to hold the largest share (62 percent) via reserve assets, ahead of non-financial corporations (17.6 percent), deposit-taking corporations except the central bank (8.6 percent), and the general government (5.3 percent).

#### 2.2. Foreign liabilities

At end-2016, foreign liabilities amounted to EUR 144,916 million, up 3.2 percent from the end of the previous year (Table 29).

The breakdown of foreign liabilities by main financial instrument shows that the change in ranking that had occurred in 2015 – when the two large contributors to financing had switched positions – consolidated during 2016. Specifically, the share of direct investment widened by 4 percentage points, to 51.8 percent, and exceeded that of other investment, which narrowed 4.4 percentage points to 32.4 percent. Foreign funding, which was ensured primarily via financial instruments classified under direct investment and, to a lower extent, by other investment (largely in the form of loans and deposits) that trended visibly downwards by 4.8 percentage points, was affected by the ongoing external debt repayments, as well as by the diminishing roll-over rates for long-term debt in the case of credit institutions (29.3 percent).

Table 29. Foreign liabilities by instrument				
	31 Decen	31 December 2015		nber 2016
	EUR millions		EUR millions	%
Total	140,454	100.0	144,916	100.0
Direct investment	67,166	47.8	75,059	51.8
Equity	45,103	32.1	48,969	33.8
Debt instruments	22,062	15.7	26,091	18.0
Portfolio investment	21,617	15.4	22,894	15.8
Equity and investment fund shares	3,280	2.3	3,034	2.1

Debt securities (short-term)	15	0.0	94	0.1
Financial derivatives	3	0.0	4	0.0
Other investment	51,669	36.8	46,960	32.4
Other equity	0	0.0	0	0.0
Loans	30,647	21.8	28,270	19.5
Trade credit and advances	5,225	3.7	6,001	4.1
Currency and deposits	14,320	10.2	11,212	7.7
Other accounts payable	226	0.2	222	0.2
SDR allocations	1,252	0.9	1,255	0.9

At end-2016, the stock of direct investment stood at EUR 75,059 million<sup>20</sup> (up 11.8 percent against end-2015) or 44.3 percent as a share in GDP versus 41.9 percent a year earlier. The weight of equity held by non-residents went down by 1.7 percentage points, while that of debt instruments in the form of intercompany loans widened by 2.3 percentage points.

Direct investment in the form of intercompany lending further targeted the main economic sectors, predominantly manufacturing, construction and real estate transactions, trade, financial intermediation and insurance, as well as professional, scientific, technical and administrative activities and support services.

Foreign investors increased their portfolio of unlisted shares in non-financial corporations, banks, insurance undertakings and other financial intermediaries, equalling EUR 44.4 billion at end-2016. The value of non-resident investors' shares listed on the domestic capital market diminished to EUR 3.9 billion, with non-financial corporations and deposit-taking corporations except the central bank as the main issuers. At end-2016, non-residents' investment in resident investment funds stuck to the year earlier level.

The geographical composition of foreign capital in the form of direct investment remained unchanged, with investors coming from countries with financial potential such as the Netherlands, Germany, Austria, France, Cyprus, Italy, Luxembourg and Switzerland.

According to the BPM6 methodological framework, in the standard presentation of the international investment position and of the gross/net external debt, the asset and liability principle has replaced the directional principle in the presentation of direct investment data. The balance on foreign direct investment in Romania (directional principle) stood at EUR 70,113 million at end-2016, as a result of deducting from the equity and borrowings of direct investment companies the loans granted by the latter within the group.

The stock of foreign direct investment by development region shows that the Bucharest-Ilfov region was in the lead, followed by Centre and West, South-Muntenia, North-West, South-East and South-West-Oltenia. The same as in previous years, in 2016 North-East came in last in terms of foreign direct investment.

At end-2016, portfolio investment saw its share in total foreign liabilities moving ahead 0.4 percentage points. The stock of investment in equity and investment fund shares declined slightly to EUR 3,034 million, while that on investment in long-term debt securities (bonds and government securities) came in at EUR 19,766 million, up 0.6 percentage points from the previous period.

The stable outlook on the investment rating, as confirmed by rating agencies, ensured further access onto foreign capital markets. In this context, the Ministry of Public Finance continued to launch government security issues on the domestic and foreign capital markets, at low costs and with sustainable maturities, ensuring the increase in the average maturity by avoiding debt peaks and the lowering of the stock of short-term debt. The stock of euro-denominated bonds issued on the domestic market trended further downwards (an issue worth EUR 1.5 billion was redeemed in February 2016), whereas that on leu-denominated securities rose, with both resident credit institutions and non-residents among the holders.

The favourable sentiment vis-à-vis the domestic economy enabled the Government of Romania to further tap foreign capital markets. Specifically, the year 2016 saw the launch of a Eurobond issue in amount of EUR 2 billion, with a coupon set at 2.875 percent and a 12-year maturity, as well as two reopenings of a 2015 issue worth EUR 1.25 billion.

Other investment amounted to EUR 46,960 million at end-2016, down 9.1 percent from a year earlier, amid further capital outflows in the form of principal repayments related to loans and deposits.

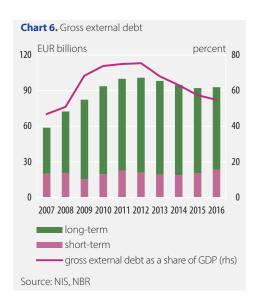

Table 30. Foreign liabilities by institutional sector					
	31 Decen	nber 2015	31 December 2016		
	EUR millions		EUR millions	%	
Total	140,454	100.0	144,916	100.0	
General government	31,380	22.3	32,439	22.4	
Central bank	1,560	1.1	1,258	0.9	
Deposit-taking corporations except the central bank	21,559	15.3	18,829	13.0	
Other sectors, of which:	85,955	61.2	92,390	63.8	
Non-financial corporations	78,710	56.0	84,718	58.5	

The composition of foreign liabilities by institutional sector was little changed in 2016 as well (Table 30). Specifically, the non-financial corporations sector still held the largest share (58.5 percent), followed by general government, with a slightly increasing share (from 22.3 percent to 22.4 percent), due to new issues that were counterbalanced by maturing government securities. Deposit-taking corporations except the central bank recorded a share of 13 percent, down 2.3 percentage points,

following a drop in the volume of deposits and the low roll-over rates of long-term instruments, while the share of the central bank narrowed 0.2 percentage points, to 0.9 percent.

#### 2.2.1. External debt

As of 2008, gross external debt posted an upward path that peaked at EUR 100 billion in 2012, reflecting heightened financing requirements, correlated with the evolution of domestic macroeconomic indicators and international developments. Afterwards,

gross external debt displayed a downward trend (Chart 6), amid steady principal repayments on both long- and short-term external debt.

At end-2016, the stock of gross external debt<sup>21</sup> totalled EUR 92,910 million, edging up 0.9 percent from end-2015, due to the reduction in the long-term component by 2.5 percent, whereas the short-term component added a sturdy 12.7 percent.

Developments in the stock of long-term external debt during 2016 were ascribable to the reduction in private external debt by 6.1 percent. External

public debt<sup>22</sup> witnessed an increase of 2.2 percent, while the central bank's external debt consisted in only one component, i.e. SDR allocations from the IMF, whose value stuck to the year earlier reading. The external debt to the IMF in relation to the central bank commitment was fully repaid (Table 31).

Table 31. Gross external debt					
		EUR millions			
	31 December 2015	31 December 2016			
Long-term external debt	71,424	69,645			
Public debt	31,610	32,299			
Private debt	38,441	36,091			
Central bank debt, of which:	1,374	1,255			
Loans from the IMF	122	0			
SDR allocations from the IMF	1,252	1,255			
Short-term external debt	20,644	23,265			
Gross external debt	92,068	92,910			

 $<sup>^{\</sup>rm 21}$  The stock of gross external debt is cash-based, net of accrued unmatured interest.

External public debt includes external loans taken directly by the MPF and local governments, external loans guaranteed by the MPF and local governments, in compliance with the legislation on public debt, including the loans taken by the MPF in accordance with Government Emergency Ordinance No. 99/2009 ratifying the Stand-by Arrangement between Romania and the IMF, as well as government securities purchased by non-residents – calculated at market value.

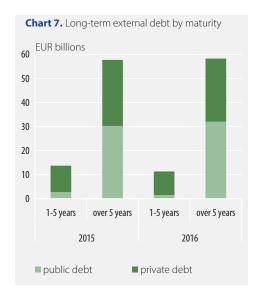

Long-term external debt ran at EUR 69,645 million at end-2016, down 2.5 percent against end-2015. To this contributed net capital outflows (EUR -1,951 million), changes in the prices of government securities held (EUR -360 million), and the influence of exchange rate changes and other changes (EUR 531 million).

Table 32. Currency composition of the NBR's foreign exchange reserve and of external debt 31 December 2016 **EUR** millions % **EUR** millions **Total** 34,242 100.0 92,910 100.0 EUR 25,702 75.1 67,635 72.8 USD 4,037 11.8 8,775 9.4 GBP 1,124 3.3 58 0.1 JPY 1,246 3.6 498 0.5 **XDR** 1,259 3.7 1,267 1.4 CHF 47 0.1 2,204 2.4 RON 0 0.0 12,246 13.2 Other 827 2.4 227 0.2

The currency composition of external debt (with the euro accounting for 72.8 percent and the US dollar for 9.4 percent) was replicated in a balanced manner in the NBR's foreign exchange reserve, where the euro and the US dollar jointly held 86.9 percent (Table 32).

Other	13,597	19.0	14,513	20.8			

Long-term external debt by creditor at end-2016 (Table 33) shows that private banks further held the largest share (29.1 percent, albeit edging down 3.6 percentage points), while official creditors saw their share decrease by 1 percentage point, to 21.6 percent, owing to debt repayments on the financial arrangements with the IMF, EBRD, IBRD, EIB, EDF-EC. Among private creditors, foreign credit institutions further supported the long-term lending

to the economy, as well as general government financing via purchasing a new Eurobond issue that increased the stock of portfolio investment.

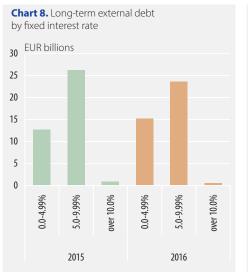

Long-term external debt by maturity at end-2016 shows a reduction in the stock of external debt across the 1 to 5 year-maturity and an increase in external debt maturing in more than 5 years (Table 34). In the context of a rise in external public debt against the previous year, further noticeable is the focus on debt management strategies whereby maturities are set so as to ensure avoiding any peak debt

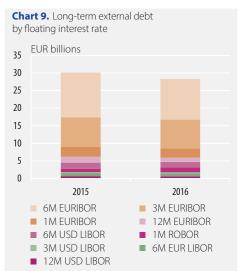

repayments. Hence, the share of external debt with more than 5 years maturity further exceeded significantly that of debt with a maturity between 1 and 5 years (Chart 7).

Long-term external debt by type of interest rate shows that the stock of floating-rate loans followed a downtrend versus a year earlier across most interest rate types (Table 35). Fixed-rate loans were on an upward path in the 0-5 percent range, whereas those in the immediately consecutive ranges contracted further. The concern for a debt service as sustainable as possible in relation to long-term loan agreements was further visible, through a decrease in the share of floating rates (Chart 9) and an increase in that of fixed rates (Chart 8).

Long-term external debt incurred by the central bank and the credit institutions witnessed a further contraction during 2016 (Table 36) due to principal repayments and withdrawals on deposits by non-residents, while general government debt continued to increase, primarily via the new securities issues on capital markets. Non-financial corporations' long-term debt stood slightly below that recorded at end-2015, its share in total debt shrinking 0.4 percentage points to 34.5 percent.

Other accounts payable	66	0.1	57	0.1							

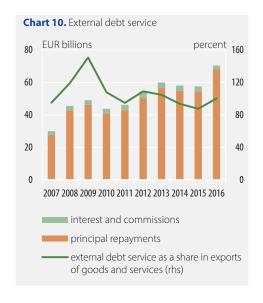

Short-term external debt ended the year 2016 at EUR 23,265 million, accounting for 25 percent of total gross external debt. Institutional sectors held uneven weights in the short-term external debt, with the non-financial corporations sector further making the largest contribution (82.3 percent, up from 74.9 percent), ahead of deposit-taking corporations except the central bank and the government sector (Table 38).

Table 38. Short-term external debt by institutional sector											
	20	15	2016								
	EUR millions		EUR millions	%

Other accounts payable	160	0.8	165	0.7						

The share of debt instruments in the form of deposits taken by credit institutions, as a means of short-term funding, shrank by 8.4 percentage points compared with 2015, to 14.5 percent (Table 39). An upward shift occurred with respect to short-term direct

investment instruments, whose share widened 8.7 percentage points and reached 49.7 percent, and to trade credit and short-term government securities.

The external debt service doubled in the period from 2007 to 2013, having posted significant increases during 2008-2009, followed by a moderate easing in 2010 and considerable rises 2011 through 2013 (Chart 10). During 2014-2015, the external debt service stood below the EUR 60 billion mark, before exceeding EUR 70 billion in 2016, reflecting government security redemptions and secondary market

transactions, liquidation of deposits by non-residents, and other payments to multilateral and private creditors in line with commitments falling due in connection with investment relations in the form of trade credit and direct investment.

In 2016, the external debt service amounted to EUR 70,436 million, of which principal repayments equalled EUR 67,885 million and payments of interest and commissions totalled EUR 2,550 million. The composition by maturity changed against the previous year, as the share of long-term external debt service narrowed from 43.9 percent in 2015 to 29.9 percent in 2016 and that of short-term external debt service widened from 56.1 percent to 70.1 percent.

Table 40. External debt service (EDS)								
	2015	2016						
EDS (EUR millions)	57,570	70,436

EDS/EXP* (%)	87.6	100.4						
EXP* (EUR millions)	65,754	70,176						
*) exports of goods and services								

During the period under review, prompted by an increase, the external debt service slightly exceeded exports of goods and services, taking 100.4 percent of their value (Table 40). In relation to GDP, the external debt service saw its share widen by 5.6 percentage points against 2015, to 41.5 percent.

Net external debt<sup>23</sup> came in at EUR 37.7 billion at end-2016, down from EUR 42.9 billion in 2015, amid the drop in net external debt of deposit-taking corporations except the central bank (credit institutions) and of other sectors (Table 41). The net external debt of the non-financial corporations sector diminished from EUR 14 billion to EUR 12.1 billion, whereas that stemming from direct investment (intercompany lending) rose to EUR 20.1 billion from EUR 18.3 billion in the previous year.

<sup>&</sup>lt;sup>23</sup> Calculated as the difference between foreign liabilities and foreign assets related to all debt instruments (loans, currency and deposits, bonds and money market instruments, trade credit).

Total	92,910	55,253	37,657

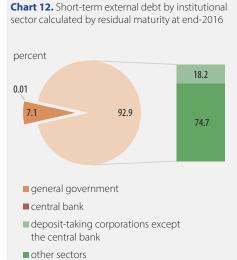

At 31 December 2016, net external debt accounted for 22.2 percent of GDP, against 26.8 percent at end-2015<sup>24</sup>, which led to a reduction in the debit balance of the international investment position from 53.6 percent to 49.4 percent of GDP (Chart 11).

The stock of short-term external debt calculated at residual value<sup>25</sup> totalled EUR 37,852 million, of which other sectors' debt accounted for 74.7 percent (Chart 12). The general government recorded an identical share, while the central bank reported a declining share, with a favourable impact on the sustainability of the public sector's short-term external debt. The ratio of the foreign exchange reserve to short-term external debt calculated at residual maturity diminished in 2016 to 90.5 percent from 95.6 percent a year earlier, fully covering the commitments falling due.

 $<sup>^{24}\,</sup>$  During the same period, gross external debt declined from 57.4 percent to 54.8 percent as a share of GDP.

<sup>25</sup> Short-term external debt outstanding at end-2016 plus the principal and/or interest on long-term gross external debt payable over the following 12 months (2017).

The analysis of the main indebtedness indicators in 2016 shows that the share of long-term external debt in GDP narrowed to 41.1 percent, the share of short-term external debt in GDP widened to 13.7 percent, the ratio of gross external debt to exports of goods and services was 132.4 percent, while the share of interest in total exports of goods and services decreased to 3.6 percent. At end-2016, Romania's international reserves (foreign currency and gold) covered 6.3 months of imports of goods and services. The ratio of foreign exchange reserves at the National Bank of Romania to short-term external debt<sup>26</sup> fell to 147.2 percent at end-2016, compared with 156.2 percent at end-2015.

 $<sup>^{\</sup>rm 26}\,$  Gross external debt with an original maturity of up to and including one year.
